The Boeing Company
Director of Recruitment
San Luis Obispo, California, 93401

To whom it may concern,

I have had a passion for coding since I was in fifth grade, when I decided to take a javascript course with Khan Academy. It amazed me how a few lines of code could create shapes and animations in the console. Since then, I decided to pursue a bachelor's degree of computer science at the university of South Carolina, where I have furthered my knowledge and interest in software development. I have had great interest in working for a company that recognizes the personal interests of its employees, and Boeing has extensive benefits, ranging from paid vacation time to excused leaves of absence during family emergencies. Working as part of a larger team has always been something that interests me, and I believe this company would be the right fit for me to start off my career.

So far in my collegiate career, I have become familiar with HTML, CSS and Python. I am proficient in Java, and I am eager to see how these languages are applied in the work environment. I am currently a part of the Capstone Scholars program at South Carolina, and my relative coursework includes Algorithmic Design, Calculus 2, and Computing 190.

Previously, I have been part of multiple coding based group projects, and I have had firsthand experience of what it takes to function as a team. These range from recreating Wordle and blackjack in Java to creating websites with HTML. I am familiar with Eclipse and Visual Studio Code IDEs. I have been working in a group environment since I was fourteen, mainly in restaurant kitchens, and I believe this combined with my knowledge of software would make me a perfect fit for the Summer internship program position.

I would love to showcase my potential in an interview, and I am eager to help the company if I am seen as eligible to do so. Thank you for your consideration.

Sincerely,

Dean Marx
